

## LM9036 Ultra-Low Quiescent Current Voltage Regulator

Check for Samples: [LM9036](#)

### FEATURES

- Ultra low Ground Pin Current ( $I_{GND} \leq 25\mu A$  for  $I_{OUT} = 0.1mA$ )
- Fixed 5V, 3.3V, 50mA Output
- Output Tolerance  $\pm 5\%$  Over Line, Load, and Temperature
- Dropout Voltage Typically 200mV @  $I_{OUT} = 50mA$
- -45V Reverse Transient Protection
- Internal Short Circuit Current Limit
- Internal Thermal Shutdown Protection
- 40V Operating Voltage Limit

### DESCRIPTION

The LM9036 ultra-low quiescent current regulator features low dropout voltage and low current in the standby mode. With less than 25 $\mu A$  Ground Pin current at a 0.1mA load, the LM9036 is ideally suited for automotive and other battery operated systems. The LM9036 retains all of the features that are common to low dropout regulators including a low dropout PNP pass device, short circuit protection, reverse battery protection, and thermal shutdown. The LM9036 has a 40V maximum operating voltage limit, a -40°C to +125°C operating temperature range, and  $\pm 5\%$  output voltage tolerance over the entire output current, input voltage, and temperature range.

### Typical Application

\* Required if regulator is located more than 2" from power supply filter capacitor.

\*\* Required for stability. Must be rated over intended operating temperature range. Effective series resistance (ESR) is critical, see Electrical Characteristics. Locate capacitor as close as possible to the regulator output and ground pins. Capacitance may be increased without bound.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### Absolute Maximum Ratings<sup>(1)(2)</sup>

Input Voltage (Survival)	+55V, -45V
ESD Susceptibility <sup>(3)</sup>	±1.9kV
Power Dissipation <sup>(4)</sup>	Internally limited
Junction Temperature (T <sub>Jmax</sub> )	150°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature (Soldering, 10 sec.)	260°C

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. DC and AC electrical specifications do not apply when operating the device beyond its specified operating ratings.
- (2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/Distributors for availability and specifications.
- (3) Human body model, 100pF discharge through a 1.5kΩ resistor.
- (4) The maximum power dissipation is a function of T<sub>Jmax</sub>, θ<sub>JA</sub>, and T<sub>A</sub>. The maximum allowable power dissipation at any ambient temperature is P<sub>D</sub> = (T<sub>Jmax</sub> - T<sub>A</sub>)/θ<sub>JA</sub>. If this dissipation is exceeded, the die temperature will rise above 150°C and the LM9036 will go into thermal shutdown.

### Operating Ratings

Operating Temperature Range	-40°C to +125°C
Maximum Input Voltage (Operational)	40V
SOIC-8 (D) θ <sub>JA</sub> <sup>(1)</sup>	140°C/W
PFM (NDP0003B) θ <sub>JA</sub> <sup>(1)</sup>	125°C/W
PFM (NDP0003B) θ <sub>JA</sub> <sup>(2)</sup>	50°C/W
PFM (NDP0003B) θ <sub>JC</sub> <sup>(1)</sup>	11°C/W
MSO-8 (DGK) θ <sub>JA</sub> <sup>(1)</sup>	200°C/W

- (1) Worst case (Free Air) per EIA / JESD51-3.
- (2) Typical θ<sub>JA</sub> with 1 square inch of 2oz copper pad area directly under the ground tab.

## Electrical Characteristics - LM9036-5.0

$V_{IN} = 14V$ ,  $I_{OUT} = 10\text{ mA}$ ,  $T_J = 25^\circ\text{C}$ , unless otherwise specified. **Boldface** limits apply over entire operating temperature range

Parameter	Conditions	Min (1)	Typical (2)	Max (1)	Units
Output Voltage ( $V_{OUT}$ )		4.80	5.00	5.20	V
	$5.5V \leq V_{IN} \leq 26V$ , $0.1mA \leq I_{OUT} \leq 50mA$ (3)	<b>4.75</b>	<b>5.00</b>	<b>5.25</b>	
Quiescent Current ( $I_{GND}$ )	$I_{OUT} = 0.1mA$ , $8V \leq V_{IN} \leq 24V$		20	25	$\mu A$
	$I_{OUT} = 1mA$ , $8V \leq V_{IN} \leq 24V$		50	100	
	$I_{OUT} = 10mA$ , $8V \leq V_{IN} \leq 24V$		0.3	0.5	mA
	$I_{OUT} = 50mA$ , $8V \leq V_{IN} \leq 24V$		2.0	2.5

Figure 5.

Figure 6.

Figure 7.

Figure 8.

## APPLICATIONS INFORMATION

Unlike other PNP low dropout regulators, the LM9036 remains fully operational to 40V. Owing to power dissipation characteristics of the package, full output current cannot be ensured for all combinations of ambient temperature and input voltage.

The junction to ambient thermal resistance  $\theta_{JA}$  rating has two distinct components: the junction to case thermal resistance rating  $\theta_{JC}$ ; and the case to ambient thermal resistance rating  $\theta_{CA}$ . The relationship is defined as:  $\theta_{JA} = \theta_{JC} + \theta_{CA}$ .

On the PFM package the ground tab is thermally connected to the backside of the die. Adding 1 square inch of 2 oz. copper pad area directly under the ground tab will improve the  $\theta_{JA}$  rating to approximately 50°C/W.

While the LM9036 has an internally set thermal shutdown point of typically 150°C, this is intended as a safety feature only. Continuous operation near the thermal shutdown temperature should be avoided as it may have a negative affect on the life of the device.

Using the  $\theta_{JA}$  for a LM9036DT mounted on a circuit board as defined at, see<sup>(1)</sup>, and using the formula for maximum allowable dissipation given in, see<sup>(2)</sup>, for an ambient temperature ( $T_A$ ) of +85°C, we find that  $P_{DMAX} = 1.3W$ . Including the small contribution of the quiescent current  $I_Q$  to the total power dissipation, the maximum input voltage (while still delivering 50mA output current) is 29.5V. The LM9036DT will go into thermal shutdown when attempting to deliver the full output current of 50mA, with an ambient temperature of +85°C, and the input voltage is greater than 29.5V. Similarly, with an ambient temperature of 25°C the  $P_{DMAX} = 2.5W$ , and the LM9036DT can deliver the full output current of 50mA with an input voltage of up to 40V.

While the LM9036 maintains regulation to 55V, it will not withstand a short circuit above 40V because of safe operating area limitations in the internal PNP pass device. Above 55V the LM9036 will break down with catastrophic effects on the regulator and possibly the load as well. Do not use this device in a design where the input operating voltage may exceed 40V, or where transients are likely to exceed 55V.

- (1) Typical  $\theta_{JA}$  with 1 square inch of 2oz copper pad area directly under the ground tab.
- (2) The maximum power dissipation is a function of  $T_{Jmax}$ ,  $\theta_{JA}$ , and  $T_A$ . The maximum allowable power dissipation at any ambient temperature is  $P_D = (T_{Jmax} - T_A)/\theta_{JA}$ . If this dissipation is exceeded, the die temperature will rise above 150°C and the LM9036 will go into thermal shutdown.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBsolete:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

- (3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
